4 August 2026

Dear John and the Edinburgh Council team,

Thank you so much for helping us with the recent donation of a pallet truck, cages, and other extremely helpful items from Liberton Hospital. These are now packed in a shipping container heading to Malawi, where they'll make a huge difference to the logistics of helping students in one of the world's poorest countries receive our IT equipment.

Since the start of 2026 at the Turing Trust, we've grown our work with Edinburgh Council, working with more areas of the council for mutual benefit. We're proud and grateful for this relationship and see lots of opportunities for it to grow, helping all of us.

In the first seven months of 2026:

- Equipment from the closure of Liberton Hospital - including an old pallet truck, trolleys, and wheeled cages - is being put into reuse in our Malawi operations, keeping it out of waste streams and reducing Edinburgh Council's disposal costs.
- More than 100 monitors from Craigmount School were kept out of landfill and are being put into reuse by the Turing Trust, helping others and reducing disposal costs for the school and council.
- We've worked with Edinburgh Council's Justice Service to arrange collections from Edinburgh schools, businesses and Scottish Government sites, providing rewarding opportunities for those doing unpaid work as part of community payback orders.
- We've provided volunteering opportunities for more than 100 people across Edinburgh, helping upskill people for positive education and career pathways, including working closely with the DWP and other external partners, such as Into Work and Volunteer Edinburgh.

The Turing Trust is registered under the Charities Commission in England & Wales 1156687
and under the Office of the Scottish Charity Regulator SC046150.

Through equipment Edinburgh Council has helped get into reuse with us already this year, around **1,800 students will be able to learn vital IT skills.** Beyond this the environmental impact **will offset 28 tonnes of CO2 emissions,** which is the equivalent of **planting 70 trees,** or **offsetting the annual carbon footprint of 3 Scots.** The embodied energy savings created are also enough to **power 7 Edinburgh homes for an entire year!**

We've put these stats into the infographic below - along with photos of our latest shipment to Malawi - which you can share internally or externally as you see fit.

As we look to fill our next containers for shipping to Malawi, could you help us with either of these challenges please?

- Items such as monitors, keyboards and mice are likely to have a disposal cost for your existing commercial IT disposal partner. So, whatever agreement you have with them, could you please check that they'd be happy for these items to come to us instead?
- Longer term, could you help start conversations with the right people, about how we can get Edinburgh Council's old computers into reuse in the coming years please?

Thank you very much for your time, effort and support.

Yours sincerely,

James Turing

Founder & CEO

Here are some photos of the cages from Liberton being packed with boxed monitors, and being loaded onto the container, all ready for schools in Malawi:
