North West Locality: Roads Capital Repair Programme 2018 - 2021

Item number	8.3
Report number	
Executive/routine	Routine
Wards	1, 3, 4, 5, 6
Council Commitments	

Executive Summary

This report breaks down the city-wide 3-year Transport Capital Repairs Programme into carriageway and footway schemes specifically in the North West Locality.

North West Locality: Roads Capital Repair Programme 2018 - 2021

1. Recommendations

- 1.1 It is recommended that the Committee:
- 1.1.1 notes the content of the report.
 - 1.1.2 notes the attached appendices for carriageway and footpath repairs 2018 – 2021.

2. Background

- 2.1 A number of requests have been received for an extract of the three year Transport Capital Repairs Programme to include approved schemes in the North West Locality area.
- 2.2 The appendices included reflect the approved roads repair schemes for the 2018 to 2021 period.

3. Main report

- 3.1 Appendices 1 and 2 list the schedules for the Transport Capital Repair Programme for carriageway and footpath works over the next three years in the North West Locality.
- 3.2 It should be stressed that the level of certainty of proposed repair schemes in future years is reduced as project lists are subject to change and may be affected by other schemes and actual budget outturns.
- 3.3 The city wide Capital budget over the three year period has been confirmed as:
- 2018/2019 £10.995m
 - 2019/2020 £13.585m
 - 2010/2021 £13.585m
- 3.4 Members have the power to request substitution of specific proposed carriageway of footpath schemes from one year to another to take account of particular local priorities. In doing so the following should be noted:
- 3.4.1 **Financial impact** – could a similar scheme in the same Ward (or other ward with agreement) be postponed, to offset the financial impact;
 - 3.4.2 **Design Resource implications** – if a scheme is to be brought forward it will not have been designed. Additional design time may be necessary;

- 3.4.3 **Contractual** – in many instances works packages are let to contractors on a block basis to reduce mobilisation and construction costs. Re-programming may not be possible or financially beneficial in certain cases; and
- 3.4.4 **Other external factors including** - utility works, events, embargo periods and statutory roadworks registration requirements (generally 3-month notice periods for major works).
- 3.5 Should a member (or the Locality Committee or any of its working groups) wish to discuss the substitution of a particular scheme for one from a future year, Sean Gilchrist, Roads Renewal Manager, would be the initial point of contact – sean.gilchrist@edinburgh.gov.uk or 529 3765.
- 3.6 Investment in the road and footway network across the city is funded from the Roads Capital budget. The core Capital budget is apportioned 70% to 30% between carriageways and footways.
- 3.7 All Scottish Councils have experienced significant historic under funding of road maintenance. Although the large increase in Edinburgh’s Roads Capital Budget, since 2003/04 has helped to improve the relative condition of the city’s roads, a system of prioritisation, approved by committee, is used to decide how and where investment is deployed.
- 3.8 Roads in all Scottish Councils are independently assessed by a company called WDM who present, on an annual basis, a Road Condition Index (RCI) for each council under the Scottish Road Maintenance Condition Survey (SRMCS). This RCI gives the percentage of roads that have been identified by the survey and should to be considered for investment.
- 3.9 In 2004 Edinburgh started at >50% RCI, and was placed 31st out of 32 Scottish Councils. In 2016/17, Edinburgh’s RCI was 34.8% and was placed at 16th out of the 32 Scottish Councils.
- 3.10 The RCI consists of three categories of deterioration: Red, Amber 1 and Amber 2, with roads in the red category being in the worst condition. Currently, the majority of carriageways prioritised for investment fall within the red category.
- 3.11 The outcome of treating the Red category roads only results in a small number of carriageway resurfacing or strengthening schemes being carried out each year, due to the cost of these treatments.
- 3.12 As part of the modelling work for the Roads Asset Management Plan, alternative scenarios for capital investment have been developed. These scenarios are predicated on a more preventative approach and aimed at roads that are in the Amber condition categories. Investment on these roads would require less expensive treatments (e.g. surface dressing, slurry sealing), which would improve the condition of the carriageway or footway and delay the need for more expensive resurfacing or strengthening treatments. Owing to the cheaper cost of the treatments required on Amber condition roads, more roads can be treated each year.

- 3.13 This preventative approach, which was introduced in 2016/17, will treat more roads within the Amber condition categories and less within the Red, thus significantly slowing their deterioration and negating the need for more robust, expensive treatments.

4. Measures of success

- 4.1 Better understanding of current three year Transport Capital Programme and how to influence it to reflect local priorities.
- 4.2 Increased level of engagement in deciding local investment priorities.

5. Financial impact

- 5.1 There is no specific financial cost in the preparation and production of Locality Capital Programme schedules.
- 5.2 The annual capital programme is scheduled to reflect the available budget, any significant changes should consider the budget available from that specific financial year.

6. Risk, policy, compliance and governance impact

- 6.1 It is considered that there are no known risk, policy, compliance or governance impacts arising from this report.

7. Equalities impact

- 7.1 Consideration has been given to the relevance of the Equalities Act 2010 and there will be no negative impact on those covered by the Protected Characteristics

8. Sustainability impact

- 8.1 The recommendations within this report do not have any adverse impact on carbon impacts, and the aspiration is that the options to be considered in the future should reduce the environmental impact in the two towns included in the study

9. Consultation and engagement

- 9.1 The purpose of this report is to allow Elected Members to consider the capital programme list in more detail, and consider re-programming schemes if appropriate.
