Choice 5 A

We want City Plan 2030 to direct development to where there is existing infrastructure capacity, including education, healthcare and sustainable transport, or where potential new infrastructure will be accommodated and deliverable within the plan period. Do you agree with this? - Yes / No

Short Response Yes

Explanation

re the Southeast Edinburgh corridor (3) The proposal to extend the tram to the science based developments on the City's perimeter is an interesting proposal however an audit must be undertaken to ascertain the impact of this work on the resident community and what environmental gains there would be over and above those achieved through the modernising of the buses and improving the pavement and bicycle routes. Also the disruption to the community life in the Southside that would ensue with a major infrastructure project. A clear plan to deliver a reduction in the numbers of cars using this corridor to access the city centre. Whatever the means of transport developed must take account of the impact the traffic will have on the residents of the communities that line the route

Choice 5 B

We want City Plan 2030 to set out where new community facilities are needed, and that these must be well connected to active travel routes and in locations with high accessibility to good sustainable public transport services. Do you agree with this? - Yes / NO

Short Response Yes

Explanation

The City of Edinburgh must work towards a solution to stop the congestion created by the volume of cars coming in from the landward areas this traffic has a detrimental effect upon the quality of life for the residents of the City of Edinburgh. The community of the Southside can not be downgraded to just be a conduit for traffic to support the economic development of the city.

| | | | | | | | | |
| Short Response | Yes | | | | | | | |
| Explanation | The community services, transport, health and fitness also recreation that are currently available need to be supported and enhanced to meet the changing demographic of the resident population. There is a conundrum for the development of services in the city centre. The use of the available accommodation within the southside of Edinburgh for students and the concomitant high rents, means that there is little possibility of young families having the financial means to reside in the area. Therefore people who are in key services provided for the city, e.g. Health and Social Care will perforce need to commute into the city. The services may be local and accessible but those providing them will be commuting into the area. The city must address the availability of residential accommodation for key service personnel. | | | | | | | |

lanes, would be safer and open up the possibility of children learning to ride in a safe environment. To discourage car ownership there have to be incentives to support this. Actively supporting Park and Ride will support the ownership and use. The Southside would benefit from a reduction in the car use and

ownership the policy must reflect this aspiration.
