

COMMUNAL BIN REVIEW ALTERATIONS TO PLANS IN AREAS

STATEMENT OF REASONS. TRO/24/28

The Communal Bin Review (CBR) project involves the redesign of the existing waste and recycling communal bin services that the Council provides to ca. 60,000 multi-occupancy and flatted properties.

The project is aiming to:

- increase and improve recycling services to residents in multi-occupancy and flatted properties providing integrated waste and recycling services.
- improve overall recycling performance.
- review the existing bin locations to develop more formalised collection hubs to improve the perception of the service and enhance the streetscape.
- improve waste and recycling service reliability.
- ensure the service reflects changes to legislation and policies within and out with the Council.

To implement the Communal Bin Review aims it was proposed to re-locate on-street communal waste and recycling bins into more formalised new hubs which required changes to the existing layout of parking places and other road-related restrictions.

Within the Controlled Parking Zones (CPZ) where communal bin hubs are used, historic on-street bin locations were replaced by the new Communal Bin hubs. These locations required new waiting and loading restrictions.

AREAS

The changes effect the Greenway Zone

The changes also effect CPZ zones: Z4, Z8, S5, S6

Similarly, on-street bin locations due to be discontinued or moved have waiting and loading restrictions. Once the old containers are removed, these restrictions will not be required.

Therefore, the waiting and loading restrictions present on these bin locations are proposed to change into Permit Holders Bays or Shared Use Parking Bays, as per adjacent bays, to increase the number of available on-street parking bays and reduce street furniture on the pavement.

In other locations the team made small changes to waiting and loading restrictions to ensure that what is in the Order matches what is on street.
