

Statement of Reasons-TRO/25/07A

The Secure On-street Cycle Parking project aims to provide secure, on-street cycle storage options for residents of high-density housing such as tenements and multi storey buildings without access to private gardens or garages. The objective of the project is to reduce barriers to cycling by enabling those without secure storage options to access secure storage and therefore own and use a bike.

The project is being delivered in phases in line with funding and demand. Phase 2 is being delivered in two batches, depending on whether the proposed hangars are located on streets which are included in the upcoming Communal Bin Review TRO or any other upcoming TROs.
